

Small Lots of Seed Permit (compulsory to U.S. customers only)

We hope that we have accurately and understandably compiled all relevant information given below. However if any inquiry, doubt or uncertainty should arise, please do not hesitate to contact us - we want you to receive your order as soon as possible and to keep the bureaucratic workload to a minimum for you !

~

All flower and plant seed shipments to the U.S. **must enter the U.S. with a special import permit** applied for by the customer and issued by U.S. authorities. In order to receive seeds in small quantities from outside the U.S., the U.S. Department of Agriculture, Animal and Plant Health Inspection Service (**APHIS**) offers a "**Small Lots of Seed Permit**". With this permit a separate phytosanitary certificate for seed orders from abroad is not required. This makes it easier, less expensive and safer for you to legally import plant seeds to the U.S.

The "Small Lots of Seed Permit" is **free of charge** and you may make several copies for subsequent orders. Each copy of the permit is good for ordering **up to 50 packages** of different species. From each species you may order **either 50 seeds or 10g of seeds**, whatever is less. You find the exact amount of seeds per package on our website. We recommend you to order only one package per species in our shop. If you would like to order more than 1 package from a single species, please contact us. We will calculate the total weight for your required amount of seeds from a certain species and let you know if it can be shipped in a single consignment.

IMPORTANT

After you have received the **permit** and a separate sheet with several **yellow/green address labels** from APHIS, please **send us for each 50 seed packages** in your order:

- **1 copy of the entire permit (ALL 3 pages)**

AND

- **1 yellow/green address label.**

Our postal address is:

Rareplants.eu
Bjoern Malkmus-Husein
Calle Flor de Pascua, 13
38314 La Orotava (S/C de Tenerife)
SPAIN

Alternatively, and in order to speed up things, you may want to **e-mail** the entire permit and 1 yellow/green address label as attachments to:

aphis@rareplants.eu

Upon receipt of your permit copy and one yellow/green address label we will dispatch your order via registered air mail to the appropriate APHIS office in the U.S., which is stated on the yellow/green address label.

After completion of inspection your order will be released from APHIS and forwarded to your home address via USPS. The entire Inspection procedure will take some 2 to 4 weeks on average.

ePermit System

The application for s Small Lots of Seed Permit has to be made electronically with a valid U.S. security number via the **ePermit system** at APHIS.

In order to use this method, you first have to register for an **eAuthentication User ID** and **Password**:

http://www.aphis.usda.gov/permits/eauth_epermits.shtml

After a successful registration for an eAuthentication please go to this page:

http://www.aphis.usda.gov/permits/ppq_epermits.shtml

On the above page select this link: [PPQ 587](#): Application for permit to import plants or plant products:

The screenshot shows the APHIS website interface. At the top, there is a navigation bar with links for Home, About APHIS, Newsroom, Career Opportunities, Help, and Contact Us. Below this is a search bar and a breadcrumb trail: "You are here: Home > Permits > Apply for a Permit". The main content area is titled "Permits" and features a section for "PPQ Permits". Under this section, there is a list of links for various permit types. The link for "PPQ 587: Application for permit to import plants or plant products" is circled in red. To the left of the main content, there is a sidebar with "Search APHIS" and "Browse by Subject" options. To the right, there is a "Related Topics" section with links for "Learn about ePermits", "Register for ePermits", "Login to ePermits", "Contact ePermits Technical Support", and "Learn about eAuthentication".

Now **login** with your **eAuthentication User ID** and **Password**.

During the application process you will be asked to provide several data. Apart from your personal data (name, shipping address, etc.) you will also need to state the below data highlighted in green color:

Plants or Plant Products to be Imported:			
Country of Origin	Scientific Names of Plants or Plant Products	Plant Parts	U.S. Port or Ports of Arrival
<i>Spain</i> ⁽¹⁾	<i>eligible taxa</i> ⁽²⁾	<i>seeds</i>	<i>[State the Port of Arrival or simply state "N/A" if not known.]</i>

⁽¹⁾ In the droplist list there may also appear "Various approved countries". If so, please select the latter instead of "Spain".

⁽²⁾ If the droplist does not give you a generic option "eligible taxa", which will cover all allowed species, you will have to select all species/entire genera in the dropdown list, which you would like to import under this permit

Intended use: "Small Lots of Seed"

Means of transportation: "Mail or Express carrier"

After transmitting the application you will receive the permit usually within few hours to few days.

Kindly note that apart from a **copy of the entire permit**, we will also need a corresponding **yellow/green address shipping label**. From our experience, usually these shipping labels will not be included with the permit, but you will have to apply for these labels separately in the ePermit system after having received the permit itself.

Disclaimer: As the access to the ePermit system is only granted with a valid U.S. social security number, we cannot give any guarantee that the above information is complete and accurate.

If you should discover any discrepancy, we would greatly appreciate your feedback so that we can improve and adjust our information: aphis@rareplants.eu

Prohibited/restricted species

At present we offer seeds from several species/entire genera, which are prohibited importation to the U.S., or which may require some additional treatment and/or inspection prior shipping, or which are considered endangered by federal U.S. law. **These prohibited/restricted seeds cannot be imported to the U.S. with a Small Lots of Seed Permit.**

Examples for these prohibited/restricted species are:

Asphodelus fistulosus

Bartsia spp.

Capsicum spp. and all *Capsicum* cultivars ("chilis", "hot peppers", etc.)

Castilleja spp.

Gossypium spp.

Helianthus annuus (wild form and all cultivars)

Hibiscus spp.

Lathyrus spp.

Linum usitatissimum

Orobancha spp.

Parentucellia spp.

Salvia officinalis

Sphaeralcea gierischii

Vicia spp.

(the above list is not complete!)

We have added a comment in the description of all of these species/genera in the shop, so that it will be clear for U.S. customers that they cannot be shipped to the U.S, and as such they should not be ordered. However, we cannot guarantee that we did not oversee a particular species - the entire USDA list we had to countercheck with our own seed stock (covering more than 4,000 species in our stock) is more than 1,400 pages long ...

If APHIS plants' inspectors may find any prohibited/restricted seeds in your consignment, they will remove the ineligible kinds and forward to you the remaining, allowed items. In case that APHIS inspectors may remove seeds from a particular species from your order, please let us know ! Simply send us a photo from the APHIS stamp showing the removed item(s). Upon receiving this proof, we will give you a full refund for any seized item without any quarrel !!

We do not sell any genetically modified species and none of our seeds are pelleted, coated nor treated with any fungicide or insecticide in order to comply with the terms set by APHIS. All seeds are packed in resealable transparent plastic zip-lock bags and labelled with full species name and quantity of seeds.

Full list of all prohibited/restricted seeds

If you would like to check particular species/genera yourself for any prohibition and/or restriction, please refer to:

https://www.aphis.usda.gov/import_export/plants/manuals/ports/downloads/plants_for_planting.pdf

Information supplied as of 10 August 2021.
